Nathaniel Bronner: If you're not going to take that vaccine, you need to be really sure your immune system is really, really strong. You're not going to get sick, and you are not going to get a whole lot of underlying conditions.

Female: You are listening to BrothersoftheWord.com. This is the message titled, "Should I Get Vaccinated" by Nathaniel Bronner. This message is number 4526.

(Music Playing: (00:00:18 - 00:00:32))

Female: And now for "Should I Get Vaccinated?"

Nathaniel Bronner: One of the things that has been questioned in the Black Church, particularly the medical community has approached the Black Church because as many of you know that vaccinations are rolling out dealing with COVID, but we're running seriously behind. And one of the big reasons there are all of these question marks about whether or not the vaccine is safe for our people. And to be honest about it, I don't know the answers to all of this stuff. What I do know is this, I sat under Dick Gregory for so long when he was alive, and one thing Gregory always said, "He said, look, just follow what the rich white folks do."

And I found that to be very, very accurate. He said, "You don't have to ask a whole lot of question, just follow what the rich white folks do," and a lot of my habits are based on that. That's why even when I travel at my office at my house, I eat off a real silverware. There's a difference. I don't eat out of plastic. I don't eat out of regular stainless. I carry my silver fork and spoon with me. I eat off a real silver. There's a reason for that. But he said, "Just do what the rich white folks do."

The rich white folks are getting vaccinated. They're not dying. We're dying at multiple rates of anybody else, and we scared of the vaccine. So, I can just guarantee you 100% that the vaccine is safe and you're not going to have any issues. But what I can tell you is this, I was in New Orleans, flew back in early this morning. I was at lunch with some of the people who help produce our show, the officials in New Orleans, and as we were sitting there with some of our people from Bronner brothers and some of the people from the New Orleans convention and their

government, one of our people were still suffering the effects of COVID, and they've had it for a long time.

One of the ladies from New Orleans, she said, "Look, I caught COVID over a year ago. When I got COVID, I started having heart palpitations and I started having when my heart was just racing. I've been over COVID for a year, and I missed two days of work this week because my heart still racing. I don't know what the vaccine is doing, but I know what COVID is doing. I know people who have been over COVID for weeks or months or even over a year, and they still got problems."

Now, maybe the vaccine may do something to a few folks. And to be honest about it, it's going to kill some folk. All medicines do. Aspirin kills people. It's a law of statistics, any medicines, peanuts kill folks. That dude, strawberries kill folks. I mean, there are some people who have anaphylactic shock from vegetables and fruits and nuts. So, yeah, there's a certain percentage that it will create a serious issue, but from the laws of statistics, especially if you have any concerns about the strength of your immune system. If you catch cold, if you got some of those underlying conditions. If you are overweight, 80% of all the people who die from COVID overweight. If you're overweight, you fit in that category.

So look, let me tell you people, if you got any of those underlying conditions, if you got any concerns that your immune system is not rock solid iron and you can stand up and laugh at COVID, you need to be in that vaccination land because COVID is messing up some folks. I don't know about the vaccine, but I know about COVID, and I know the rich white folks getting it. So I know that rich white folks getting it and the black folks in.

So, which line do you think I want to be? It's just as simple as that. It's a whole lot of conspiracy theories going around 90% of the stuff. It has no basic. In fact, Tom, I already got a microchip and it's going to track me. You don't need a microchip that tracks you, and you got a cell phone with your location turn on. Why you need a microchip that tracks you for, and you don't go anywhere without your cell phone.

Some of this stuff is just crazy. They got all this stuff. And if anything, whether that vaccine may change my DNA, you know COVID has changes some DNA.

So they got black folks where they are afraid of the vaccine and not scared of the virus. I just left New Orleans, and I mean, some folk was packed in the street dancing. I mean, the airlines this morning when I came in through the airport, the security line literally was wrapped up through baggage claim. They're traveling, they go in. And when I got off of the plane during the Thanksgiving holidays, I had never seen that high up a percentage of black folks traveling in my life. Most of the time, when you go through the airport, it's about 80 - 85% white. This was about 75% black. I said, even Negroes going everywhere, and then they got them stimulus check. The line gets wrapped everywhere.

So people, I am telling you, don't be fooled by all these crazy conspiracy stuff. It has no basis in science. I can't guarantee you that you're not going to have an issue with the vaccine, but what I can tell you is that, unfortunately, we've had multiple cases here with the arc of COVID. We've had not one death and we've had not one hospitalization. So we have been really blessed. But also here, we do stuff where we're stronger.

See, I don't know whether I've come in contact with COVID or not, but I knew it bothered me if I have. And I'm not afraid of it, but I know I got to keep my system in shape. Well, I'm going to be in that 50% of people who are asymptomatic that COVID simply does not bother but you need to be sure. If you're not going to take that vaccine, you need to be really sure your immune system is really, really strong, you're not going to get sick, and won't got a whole lot of underlying conditions. And you can script that. Look yourself in the mirror and said, "Did buy the rid of a COVID." That's what you need to be able to do. You do have to start rolling everywhere, and aren't ready for COVID. You need to be in the vaccination line. It's just as simple as that.

So these are some things I just want to talk with you about that for just a minute. The vast majority of America needs to take the vaccine. It's just as simple as that. Some people, they may not, but they really need to be sure their system is strong enough to where their body can last at COVID without an issue.

And if you don't have that assurity, you need to be in that vaccination line. Just as simple as that.

So I wanted to talk with everybody about that because now they're going to be available for everybody. And I'm not saying I don't know where the virus came from. I don't know what all is behind this. And there may be some insidious stuff behind it, but the point is this, when there's usually an insidious plot, the public really has it right. Anytime you see a big crowd going in one direction, you can just about be sure that's the wrong direction. And I was at the Springs, and I was listening to all these folks talking about New Orleans. I'm going to say to myself, "They don't even know what RNA and DNA mean." And I knew they did. And they were coming out all the genetic changes. You don't know what is (00:08:17) nucleic acid. They don't know that. But all of a sudden, all these folks all of a sudden that geneticist.

So, take that vaccine. If you are not 100% sure in the strength of your immune system, take that vaccine. And they said "where they may be covering up some of the folks whose dead probably?" Probably so. But I know personally. Too many people who have had COVID, who are still having effects from it. Calling it long COVID. We got people in the office like that. They still have an effect from long COVID.

So, I don't know what the vaccine going to do, but I know what COVID does. So if you're not 100% sure about the strength of your immune System, take that vaccine. That's just the wisdom. Don't listen to all this conspiracy stuff. It's totally not founded and the science is just way off and the stuff makes no sense whatsoever. Now, Bill Gates is not the anti-Christ.

So it's just some of all this crazy stuff, but don't get wrapped up into all of that. Don't travel down that worm hole. If you're going to follow something unlike Dick Gregory. He has a whole lot of sin. Do what the rich white folk do, and when you do what they do, don't do what we do. Do what the rich white folk do. And those of you and your nursing, you know who died in the hospital from COVID, it's mostly us. So don't do what we do. You do what the rich white folk do. They end the line getting that vaccine. You need to get that vaccine, if you're not 100% sure about the full strength of the immune system.

So that's that and hopefully that's going to help somebody avoid an illness that you do not have to go through. Amen. Barry Hits(ph)

00:09:58

Barry Kits

Dear Heavenly Father, we just thank you, first of all, for bringing us through for putting a head around us or watching over us, dear Father, from shielding us from so much. I just thank you for where you have brought us, where you've protected us from. Even within this sanctuary, father you have kept us and I just thank you and thy son Jesus His name we pray. Amen.
